(a) Cost in distribution vs under shift
median cells to certify (θ = 0.10)
uniform (ALPHA)
classifier-driven
50/50 mixture, hedged
KU-Optofil p = 0.15
KU-Optofil p = 0.20
MLL23 p = 0.15
MLL23 p = 0.20
RV-PBS p = 0.15
RV-PBS p = 0.20
(b) Cell-level analysis of field samples
false certification at p = θ
θ = 0.10
θ = 0.20
Beta-binomial model, 17 cells/field
E3.1 composites (observed)
real smears: bias-corrected ICC (95% CI)
raw ICC (biased upward)
α
within-field clustering of blasts (ICC, log scale)
