(a) Premature stops at matched cost
worst case, any strategy: 1 − n/N = 0.84
InfoDPP-PAC
uniform, matched cost
miss rate, one critical field (k = 1)
cells per field (dilution m)
(b) Kill-test 1: stopping signal vs relevance
information gain (stopping signal)
relevance, cell-level teacher
relevance, field-level teacher
(exploratory, 10,000 episodes)
chance
AUC for identifying critical fields
cells per field (dilution m)
